Vaisala K-PATENTS® Process Refractometer PR-43-G

For In-Line Concentration Measurement in Industrial Applications
TYPICAL APPLICATIONS

ALKALIES AND CHLORINE
Chlorine, Hydrochloric acid, Sodium hydroxide (Caustic soda), Sodium chloride (Brine), Sodium hypochlorite, Sulfuric acid.

CHEMICALS
Acetic acid, Acrylate, Amine oxide, Amino acid, Ammonium fluoride, Ammonium hydroxide, Ammonium nitrate, Ammonium sulphate, Caustic soda, Cellulose derivatives, Citric acid, Copper chloride, Chromium trioxide (or Chronic acid), Ethyl alcohol, Ethylene glycol, Formaldehyde, Formic acid, Gelatine, Glycerol, Hydrogen peroxide, Iron chloride, Lactic acid, Lubricating oils, Nickel chloride, Nitric acid, Oleum, Polyamides, Polycarbonates, Polyethylene, Potassium compounds, Resins, Sodium alclinate, Sodium bicarbonate, Sodium dichromate, Sodium gluconate, Sodium hydroxide, Styrenes, Sulfuric acid, Urea, etc.

PLASTICS, RESINS, FIBERS AND SYNTHETIC RUBBER
Acetate, Acrylics, Adipic acid, Caprolactam, Cellulose acetate fibers, Cellulose triacetate (CTA), Cyclohexanol, Cyclohexanon, Dimethylterephthalate, Dimethylformamide, Fiberglass binder solution, Hexamethylene diamine, Nitric butadiene rubber (NRB), Nylon salt, Polyamides, Polyesters, Rayon, Spandex, Synthetic latex, Vinlys. Finishing, coating and dyeing mediums of textiles.

METAL MACHINING AND MINING

SALTS AND SODIUM COMPOUNDS
Brine, Glauber’s salt, Sodium carbonate, Sodium chloride, Sodium sulfate, Sodium sulfite, etc.

EFFLUENT AND WATER TREATMENT

OTHER
REFRACTOMETER INSTALLATION

The Process refractometer PR-43-G is installed in the main processing line, bypass line or vessel either directly with Flange or Sandvik coupling process connection, or via a large variety of cost-effective and easy to mount flow cell options. The user interface of the refractometer can be installed locally in the field, remotely in the control room or in both locations by connecting several user interfaces in a network.

COMPACT PROBE

- Sandvik L coupling and wafer flow cell connection for 0.5” and 1”

LONG PROBE

- Flange and flow through cell connection for 1”
- Sandvik L coupling and pipe flow cell connection for 1”
- Sandvik coupling or flange connection for 2” and larger
- Sandvik coupling or flange connection for vessel

DESIGNED FOR HARSH ENVIRONMENTS

The Process refractometer PR-43-G offers accuracy, repeatability and reliability even in the most extreme environments that can be corrosive, abrasive, subject to extreme temperatures, pressures, vibration or contamination, humidity and dust, or any combinations of these factors.

- Designed to Pressure Equipment Directive PED 97/23/EC and ASME Section VIII Division 1 - Pressure Vessels.
- The refractometer wetted parts construction has no welds for increased safety.
- Selection of different IP codes (IEC 60529) and NEMA ratings for the refractometer and user interface that withstand various harsh conditions.
- Special wetted parts materials are available for harsh environments and aggressive process fluids.
- Intrinsically safe and hazardous area certification is provided for hazardous areas.
- Material traceability certification conforming to EN 10204 3.1.
- Also third party inspections and documents can be ordered.
- When standard model codes are not sufficient to fulfill requirements, please consult the factory for engineered solutions, e.g. special wetted materials or custom process connections. The engineered solutions may be subject to additional delivery time.
STANDARD PACKAGES

PROCESS REFRACTOMETER PR-43-G AND MULTICHANNEL USER INTERFACE MI

A fully equipped system with refractometer, interconnecting cable and multichannel user interface with high performance industrial computing, wash control and high expandability capabilities and connectivity.

The multichannel user interface MI provides the highest level of industrial computing, intelligence and sophisticated features as well as environmental protection.

PROCESS REFRACTOMETER PR-43-G AND COMPACT USER INTERFACE CI

A compact, single device connectivity system with refractometer, interconnecting cable and compact user interface for applications where a local or remote display and access is preferred and where no wash is required.

PROCESS REFRACTOMETER PR-43-G AND WEB USER INTERFACE WI

A stand-alone system with refractometer, interconnecting cable and web user interface designed particularly for direct control system integration in applications where no industrial computer (e.g., to control prism wash) or monitoring display is required.
The Process refractometer PR-43-G can be equipped with different user interface options for handling the user and refractometer as well as refractometer and control system interaction.

MULTICHANNEL USER INTERFACE MI
- High-performance, industrial computing system
- Expandable system and connectivity for up to four (4) PR-43-G refractometers and eight (8) I/O modules
- Environmentally sealed IP67, Type 4X, rugged 316 stainless steel enclosure that withstands the corrosive cleaning agents and frequent washes
- Ideal for demanding field and outdoor conditions (0−50°C, 32−122°F)
- Prism wash diagnostics and control
- Trend display that shows one or two graphs over a selected period of time
- Embedded measurement apps: The apps are small programs that give different types of measurement data and functionality.
- Modules, e.g. mA-output and mA-input module
- 10" graphical touchscreen color display
- 21 CFR 11 compliant user identification and management, electronic data records and data-logging, event log/audit trail

COMPACT USER INTERFACE CI
- Single device connectivity
- Local and/or remote display and access
- Light-weight, aluminum enclosure for control room conditions and epoxy coated IP66, Type 4X enclosure with polycarbonate display shield for field conditions
- Trend display
- 10" graphical touchscreen color display.

WEB USER INTERFACE WI
- Web browser interface via Ethernet connection to a control system or any type of computer
- Output values are transmitted through 4-20 mA output and output values, diagnostic information and trends are transmitted via an Ethernet connection using a UDP/IP protocol

FIELD COMMUNICATOR FC-11
The user can remotely operate and configure the refractometer using the hand-held Field Communicator FC-11. The FC-11 provides an identical window into the process, showing measurement and diagnostic data including the optical image, and facilitating real time analysis and configuration directly at the refractometer.
**UNIQUE 3-LAYER CALIBRATION**

The concentration calibration of the PR-43-G refractometer is organized in three (3) layers: the Refractometer nD calibration, chemical curve and field calibration. The advantages of the layer feature are free interchangeability of refractometers, applications and recipes without any need for mechanical calibration adjustment in the field.

The optical image information is detected by the CCD-element and transformed into a number (CCD). The process temperature T is measured by a Pt-1000 resistance.

**LAYER 1:**

Refractometer nD calibration: The actual refractive index nD is calculated from the CCD.

**LAYER 2:**

Chemical curve: The refractometer calculates the Brix or concentration value based on nD and TEMP. The result is a temperature compensated calculated concentration value CALC.

**LAYER 3:**

Field calibration: Adjustment of the calculated concentration value CALC may be required in order to compensate for some process conditions or to fit the measurement to the laboratory results. The Field calibration procedure determines the appropriate adjustment to CALC. The adjusted concentration is called CONC.

Output signal: The output signal is transmitted over the 4–20 mA current output or through the Ethernet connection.
All measuring components (light source, prism, temperature sensor and CCD-camera) are in one solid CORE-optics module.

The CORE-optics is mechanically isolated from the influence of external forces and vibrations. The CORE-optics contains no mechanical adjustments.
### SPECIFICATIONS

<thead>
<tr>
<th>REFRACTOMETER PR-43-G</th>
<th>Standard</th>
<th>Optional</th>
</tr>
</thead>
<tbody>
<tr>
<td>REFRACTOMETER MODELS</td>
<td>PR-43-GC Compact model; PR-43-GP Probe model</td>
<td></td>
</tr>
<tr>
<td>Refractive Index range</td>
<td>Full range, nD = 1.3200...1.5300 corresponds to hot water...100 % by weight.</td>
<td>nD = 1.260...1.470 nD = 1.410...1.620 nD = 1.520...1.730</td>
</tr>
<tr>
<td>Accuracy</td>
<td>Across the full range of 0–100 %: Refractive index nD ±0.0002 corresponds typically to ±0.1 % by weight.</td>
<td></td>
</tr>
<tr>
<td>Repeatability</td>
<td>Across the full range of 0–100 %: nD ±0.00004 (corresponds typically to ± 0.02 % by weight).</td>
<td></td>
</tr>
<tr>
<td>Speed of response</td>
<td>1 s undamped, damping time selectable up to 5 min.</td>
<td></td>
</tr>
<tr>
<td>Calibration</td>
<td>With NIST traceable Cargille standard R.I. liquids over full range.</td>
<td></td>
</tr>
<tr>
<td>Patented CORE-Optics</td>
<td>No mechanical adjustments and digital measurement with 3848 pixel CCD element, sodium D-line light emitting diode (LED), built-in PT-1000 temperature sensor (linearization according to IEC 751).</td>
<td></td>
</tr>
<tr>
<td>Temperature compensation</td>
<td>Automatic, digital compensation.</td>
<td></td>
</tr>
<tr>
<td>Instrument verification</td>
<td>With NIST traceable Cargille standard R.I. liquids and guided procedure, including a printable verification report.</td>
<td></td>
</tr>
<tr>
<td>Process connection</td>
<td>PR-43-GC: Sandvik coupling L 60.3 mm (2 inch) for pipe size of 2 inch; via reducing ferrule PR-9285 for pipe size of 1.5 inch.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>PR-43-GC: Sandvik coupling L 76.1 mm (2.5 inch) for pipe sizes of 2.5 inch and larger; via Wafer flow cell WFC for pipe sizes of 0.5 inch, 1 inch or 1.5 inch. Wafer flow cell body mounts between ANSI 150 lbs, DIN PN 25 or JIS; via Pipe flow cell PFC for pipe line size of 1 inch. Pipe flow cell process connection with ANSI 150 lbs, DIN PN 25 or JIS 10K.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>PR-43-GP: ANSI 2 inch, 3 inch or 4 inch with 150 lbs or 300 lbs, DN50, 80 or 100 PN25, JIS 50A, 80A or 100A with 10k; Sandvik L coupling 88 mm (3 inch) welded construction; via Flow through cell FTC for pipe sizes of 1 inch or 2 inch. Flow through cell process connection with ANSI 150 lbs or 300 lbs, DIN PN25 or JIS 10K.</td>
<td></td>
</tr>
<tr>
<td>Process pressure</td>
<td>PR-43-GC: Sandvik coupling L 76.1 mm (2.5 inch) up to 25 bar (350 psi)/Sandvik L 60.3 (2 inch) up to 40 bar (580 psi) at 20°C (70°F); PR-43-GP: flange and L coupling connections up to 25 bar (350 psi) at 20°C (70°F).</td>
<td></td>
</tr>
<tr>
<td>Ambient temperature</td>
<td>Refractometer: min. -40°C (-40°F), max. 45°C (113°F); for higher ambient temperatures a cooling cover for refractometer electronics housing is available; Multichannel user interface MI: min. 0°C (32°F), max. 50°C (122°F); Compact user interface CI: min. 0°C (32°F), max. 50°C (122°F).</td>
<td></td>
</tr>
<tr>
<td>Process wetted parts</td>
<td>AISI 316L stainless steel, prism sapphire, prism gasket modified PTFE.</td>
<td></td>
</tr>
<tr>
<td>Refractometer protection class</td>
<td>IP67, Type 4X (for outdoor use).</td>
<td></td>
</tr>
<tr>
<td>Refractometer weight</td>
<td>PR-43-GC (2 inch): 1.7 kg (3.7 lbs), PR-43-GP (2 inch): 6.7 kg (14.8 lbs).</td>
<td></td>
